

## REDWOOD

Redwood's botanical names are *Sequoia sempervivens* and *Sequoiadendron giganteum*. These fence pickets, rails, and posts are one of the most durable and decay-resistant Native American wood types. Fencing is produced from trees in Northern California and western Nevada.

Availability is typically the Midwest to Texas and West to California. Fence styles include Solid Board Vertical, Solid Board Horizontal, Board-on-Board, and Alternating Panel.

**Lengths:** 4', 5', 6', 8'

**Widths:** Nominal: 4" 6" 8"  
Actual: 3 1/2" 5 1/2" 7 1/2"

**Thickness:** Nominal: 1" 1" 1"  
Actual: 5/8" 11/16" 3/4"

**Surfacing:** Rough both faces (Rough Sawn) | Smooth 1 face (S1S2E) | Smooth both faces and edges (S4S)

- All-natural renewable resource. Harvested from managed forests.
- Durable. Excellent "dimensional stability." Less likely to warp, split, cup, or check.
- Heartwood is naturally resistant to insects and decay.
- Class B compliance and safe to use in California's Wildland-Urban Interface (WUI) areas.
